NEXUS INDEX

1.1 Engagement Coverage Index

This score reflects the breadth of technical validation across core governance pillars.

PILLAR	STATUS	PRIORITY
GOV	VALIDATED	Strategic
RES	VALIDATED	Strategic
INT	VALIDATED	Strategic
PRI	GAP	Strategic
SOV	VALIDATED	Strategic
ID	GAP	Strategic

Business Profile & Objectives

PART I.A: BUSINESS CONTEXT

ENGAGEMENT PARAMETER	CLIENT SPECIFICATION
Engagement Description	**Strategic architectural review of the core platform.**
Primary Deliverable	**Final architecture blueprint and roadmap.**

1.5 Regulatory Alignment: DORA Bank Resilience

Narrative: DORA resilience and TLPT-ready scoping for critical ICT systems, functions, and third-party ICT dependencies.

REGULATORY BODY — **Digital Operational Resilience Act (DORA) (European Union)**

ARTICLE/REF	TITLE	REQUIREMENT	SCOPING GUIDANCE
Article 24	General Control Testing	ICT resilience testing programme.	Critical ICT systems.
Article 26	TLPT	Threat-led penetration testing.	Every 3 years for critical entities.

Mandatory Evidence Artifacts:

Asset Register | Threat Scenarios | TI Plan | Remediation Plan

IMPLEMENTATION GUIDANCE — **DORA**

ICT Asset Criticality Mapping

Under DORA, scoping must start with the ICT Asset Register. Every asset in scope must be mapped to a 'Critical or Important Function' (CIF). If an asset supports a CIF, it is subject to more rigorous testing and reporting requirements.

Third-Party ICT Risk

DORA requires that testing includes third-party ICT service providers where they support critical or important functions. This scoping pack must include a list of involved third parties and confirmation of their authorization to test.

Threat Intelligence Requirements

For TLPT (Threat-Led Penetration Testing), the scope must be driven by current, relevant threat intelligence. The scenarios defined in this pack should match the TTPs of actors targeting the financial sector.

IMPLEMENTATION GUIDANCE

MITRE

T1190 - Exploit Public-Facing Application

Adversaries may attempt to take advantage of a weakness in an Internet-facing computer or program using software, data, or commands in order to cause unintended or unanticipated behavior.

T1078 - Valid Accounts

Adversaries may obtain and abuse credentials of existing accounts as a means of gaining Initial Access, Persistence, Privilege Escalation, or Defense Evasion.

T1566 - Phishing

Adversaries may send phishing messages to gain access to victim systems. All forms of phishing are electronically delivered social engineering.

T1059 - Command and Scripting Interpreter

Adversaries may abuse command and script interpreters to execute commands, scripts, or binaries.

IMPLEMENTATION GUIDANCE

OWASP

A01:2021-Broken Access Control

Testing must validate that users cannot act outside of their intended permissions. Failures typically lead to unauthorized information disclosure, modification, or destruction of all data.

A02:2021-Cryptographic Failures

Testing must verify the protection of sensitive data in transit and at rest. This includes passwords, credit card numbers, health records, personal information, and business secrets.

A03:2021-Injection

Testing must validate that user-supplied data is not interpreted as commands or queries (e.g., SQL, NoSQL, OS command, ORM, LDAP, and EL expression or OGNL injection).

A04:2021-Insecure Design

Testing must evaluate the architectural design for missing or ineffective control design. Insecure design cannot be fixed by a perfect implementation.

Control 1: Inventory and Control of Enterprise Assets

Actively manage (inventory, track, and correct) all enterprise assets connected to the infrastructure physically, virtually, remotely, and those within cloud environments.

Control 4: Secure Configuration of Enterprise Assets and Software

Establish and maintain the secure configuration of enterprise assets and software.

Control 12: Network Infrastructure Management

Establish, implement, and actively manage network devices, in order to prevent attackers from exploiting vulnerable network services and access points.

Regulatory Data Governance

PART II: GOVERNANCE

2.1 Digital Chain of Evidence

Artifacts produced during this engagement follow a cryptographically-verifiable lifecycle.

LIFECYCLE PHASE	VALIDATION METHOD
Acquisition	SHA-256 Verified Capture
Processing	Air-Gapped Analysis Environment
Destruction	NIST 800-88 Compliant Wipe

2.2 Data Sovereignty & Residency

To adhere to regulatory data protection requirements, the following residency rules apply to all engagement artifacts.

FRAMEWORK	RESIDENCY MANDATE
DORA	Must remain strictly within EU boundaries or approved adequate jurisdictions. Cloud storage requires EU-based tenants.

2.3 Regulator Audit & Access Rights

The following audit rights and access privileges are contractually granted to the respective regulatory bodies.

REGULATOR	ACCESS RIGHTS
DORA	European Supervisory Authorities (ESAs) must have full and unrestricted access to threat-led penetration testing results.

Rules of Engagement & Operational Safety

Rules of Engagement Baseline

The following operational safety constraints govern all technical execution activities.

CONTROL	AUTHORIZED CONSTRAINT
Testing window	Mon-Fri 09:00-18:00
Blackout dates	Dec 24 - Jan 2
Emergency stop contact	**SOC Lead (+1 555-0199)**
Authorized source IPs	10.0.0.50, 10.0.0.51

Emergency Kill Switch Protocol

- Stop immediately if a business service degrades, unexpected sensitive data is reached, or the client asks testing to pause.
- Document the last action, affected target, timestamp, evidence state, and restart condition before resuming.

Default Exclusions

Prohibited unless explicitly authorized in writing: DoS, stress testing, destructive actions, persistence, malware-like payloads, real data exfiltration, production data modification, social engineering, and physical intrusion.

Technical Scope of Work

PT-NET-EXT

External Network Penetration Test

A structured assessment of internet-facing infrastructure including firewalls, VPNs, mail gateways, and publicly reachable hosts. Testers simulate real-world attackers attempting to gain unauthorised access from outside the perimeter. Findings are rated by exploitability and business impact.

2 Days | €3,500 Budgetary ALLOC

PT-NET-INT

Internal Network Penetration Test

Simulates an attacker with initial foothold inside the corporate LAN — whether an insider threat, a compromised workstation, or post-phishing access. The assessment covers lateral movement, privilege escalation, network segmentation effectiveness, and sensitive data exposure.

3 Days | €5,000 Budgetary ALLOC

PT-APP-WEB

Web Application Penetration Test

Manual-led security testing of web applications aligned to the OWASP Top 10 and WSTG, covering injection flaws, broken authentication, sensitive data exposure, XML external entities, broken access control, security misconfigurations, XSS, insecure deserialisation, and business logic vulnerabilities.

3 Days | €4,000 Budgetary ALLOC

PT-APP-API

REST/GraphQL API Security Testing

Targeted assessment of REST, SOAP, and GraphQL APIs using the OWASP API Security Top 10 framework. Covers broken object-level authorisation, excessive data exposure, lack of rate limiting, broken function-level authorisation, mass assignment, security misconfiguration, and injection flaws.

2 Days | €3,500 Budgetary ALLOC

RT-FULL

Full Red Team Engagement

An adversary simulation engagement where a dedicated red team uses realistic threat actor TTPs to attack the organisation across all vectors — digital, physical, and human — without prior disclosure to defenders. Measures the organisation's detection, response, and containment capabilities.

17 Days | €25,000 Budgetary ALLOC

Assessment of cloud-native infrastructure, IAM, and resource configurations.

3 Days | €5,000 Budgetary ALLOC

Omni Control Matrix

PART III.B: OMNI MATRIX

3.1 Omni Control Mapping

The following granular controls are in scope for the selected execution modules.

CONTROL ID	DOMAIN	DESCRIPTION
AC_01	None	None
IA_02	None	None
SI_04	None	None

RACI Governance

PART III.C: RACI MATRIX

3.2 RACI Governance Matrix

Responsibility Assignment Matrix for engagement activities.

ACTIVITY	PROVIDER	CLIENT SEC LEAD	CLIENT IT	CLIENT EXEC
Project Kick-off	**R**	**A**	**C**	**I**
Access Provisioning	**C**	**I**	**R**	**A**
Technical Testing	**R**	**A**	**I**	**C**
Report Delivery	**R**	**A**	**C**	**I**
Remediation Sign-off	**C**	**I**	**R**	**A**
